

## **lode Demo**

This is a demo showing the benefits of using LODs.

### **Dev**

Run `yarn setup` to get up and running and then `yarn start`

### **LODE - CLI**

Run `yarn lode-cli` to run the lode-cli to generate the simplified meshes used in the optimized version.

### **Info**

There are currently two variants:

- optimized
- non optimized

In order to run the optimized version pass `?optimize`.

This demo will have to be expanded further, it's currently only intended to be used in order to define the base benchmark.
